

Installation Guide

Acoustic Wall Panels

2026

Introduction

Wall Preparation Before starting the installation process, ensure that the surface is clean (free from dust, peeling paint or dirt), structurally sound, dry and free of defects. When cutting and placing the panels according to the area, decide in which areas the cut parts will be placed and try to apply the products as symmetrically as possible. It will be useful to take measurements and mark the area beforehand.

Disclaimer: Unica Acoustic focuses on producing the highest quality felt products. However, the product
Due to its thin, fibrous and textured structure, there is a slight visual defect when the product is viewed closer than 1 - 1,5 meters.
s can be seen. These minor imperfections are within industrial manufacturing tolerances. Assembles printed panels -
we recommend aligning the panels as closely together at eye level (+/- 5 mm alignment tolerance
is normal).

Bonding Method

Required Tools: Clean gloves, utility knife, metal ruler, tape measure, ladder/scaffolding, mastic gun-
, J-Roller (Print roller), construction adhesive, spray adhesive.

Preparation:

1- After preparing the surface, try the panels without applying adhesive (dry). Panels are flat and aligned Make sure it is
. If necessary, make precise cuts using a utility knife and ruler.

Mounting Adhesive Application: Apply to the inner edges of the panel with a mastic gun. addition of adhesive
To prevent it from overflowing, start from two fingers' width from the edges and move towards the center.
draw correct zigzags (as shown in figure a).

Assembly:

4- Press the panel onto the surface, keeping it as flat as possible. Apply pressure to ensure tight seams; otherwise
Otherwise, we recommend that you leave a joint gap between the panels.

5- If necessary, fasten the panels from the corners with paper tape and fix them with your hand for a few minutes.

6- Clean up any excess glue before moving on to the next panel. Apply the adhesive to the front of the panel
Avoid contact.
